PROFESSIONAL SUMMARY

Data Analyst with hands-on experience across 4 independent projects and 100,000+ records analyzed, skilled in Python, SQL, Microsoft Excel, and Power BI to extract insights and support data-driven decisions. Seeking a Data Analyst Intern role to document, standardize, and improve data processes that drive efficiency and informed business decisions.

EDUCATION

University of California, Riverside
B.S. in Computer Science

September 2025 – June 2029
GPA: 3.67/4.0

PROJECTS

SectorSight: COVID-19 Economic Impact Analysis

April 2026 – May 2026

- Reduced data inconsistencies by 33% and saved 3+ hours/cycle by automating data cleaning on 100k+ financial transaction records using **Pandas** and **NumPy**.
- Eliminated misclassification across 5+ categories and improved revenue reporting accuracy by 20% by standardizing payment methods and transaction statuses across 100k+ records using **Pandas**.
- Identified 8+ COVID-19 impacted US industries by conducting EDA using **Matplotlib** and **Seaborn**, enabling data-driven resource reallocation to high-growth sectors.
- Reduced manual market analysis by 4+ hours/week by developing a **Power BI** dashboard visualizing pre- and post-COVID performance across 8+ US industries.

SalesPulse: Forecasting and Analytics

January 2026 – March 2026

- Improved data reliability by 25% by automating cleaning and preprocessing on 300k+ sales records using **Python**, handling missing values and outliers.
- Uncovered 3+ seasonal trends and holiday-driven sales spikes across 140+ weeks of data by conducting EDA using **Pandas** and **Matplotlib**, informing forecasting strategy.
- Achieved 78.75% accuracy improvement over baseline by building a time-series forecasting model, leading to a potential 23% reduction in forecasting errors.
- Saved 5+ hours/week of manual analysis by developing a **Tableau** dashboard automating weekly reporting.

CoralLens: Coral Reef Bleaching and Degradation

December 2024 – January 2025

- Reduced reef risk assessment time by 40% by building a predictive ML model using **Python (Scikit-learn)** to predict coral reef bleaching risk from 4 environmental factors.
- Achieved 60% accuracy on test set using **Random Forest** by engineering features from 20+ years of historical records, enabling early identification of at-risk reef zones.
- Enabled marine biologists to prioritize conservation efforts across 15+ reef sites, reducing manual risk assessment by an estimated 3+ hours/week by developing a **Power BI** dashboard.

ShelfSense: Library Database Management System

October 2024 – November 2024

- Built a full-featured CRUD application in **Python** and **MySQL** for library operations, including book inventory, customer profiles, and lending workflows.
- Implemented create, read, update, and delete operations for book and customer records while maintaining accurate records of issued and returned books.
- Developed a command-line interface enabling librarians to efficiently manage 10k+ book records and 9k+ customer profiles.

AWARDS & HONORS

Best Beginner Award — CutieHacks Hackathon, 2025

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Databases & Data Manipulation: MySQL, Pandas, NumPy

Data Visualization & Analytics: Tableau, Power BI, Matplotlib, Google Sheets

Tools & Platforms: Visual Studio Code, Jupyter Notebook, PyCharm, Google Colab, Git, GitHub, Microsoft Suite (Excel, Word, PowerPoint)

AI & ML Libraries: Scikit-learn
